Unit Test Report

SE Miniproject | Form upload 1 of 3 | Team 10

Record	Verified value
Project	Collaborative Study Material & Quiz Platform (Study Commons)
Prepared by	Harshit Chandak - PES2UG24CS185; whole Team 10 evidence
Execution date	2026-11-05 (Asia/Calcutta)
PDF preparation date	2026-11-06; packaging existing results, not a new test run
Tested source	888c0666ae78e14be134a6c090be860d254ddb00
Integrated main commit	1c6ecafc3807a1f3916d79ea81416cd580e12eec (PR #44, merged and closed)
Preserved baseline	Submitted SRS, SAD and Test Plan unchanged

Scope covers Dharani (Auth/Materials/Dashboard), Prajwal (Question Bank/Quiz), Karan (Attempt/Result/History/Performance), and Harshit (Admin/Security/CI/shared integration).

Evidence links in this PDF point to immutable files in the integrated repository. Dates, environment, coverage limitations and outstanding acceptance items are retained; no approval is inferred from automated passes.

Classification: 199 backend unit-directory/module cases are the unit-level total. The 190 frontend cases mix component, service and integration suites; they are not described as 190 pure unit cases. The 131 backend integration and 21 browser cases are shown as supporting project validation and are not added to the backend unit total.

Execution date: **2026-11-05**, Asia/Calcutta. Source: `888c0666ae78e14be134a6c090be860d254ddb00`. Branch: `PES2UG24CS185-Sprint-2`. The execution manifest identifies the tested source and reporting configuration.

Scope: **the whole Team 10 project**, covering Auth/Materials (Dharani), Question Bank/Quiz (Prajwal), Attempt/Result/History/Performance (Karan), Admin/Security/CI and shared integration (Harshit). Execution coordination does not replace independent peer acceptance.

Test level	Passed	Failed	Skipped
backend integration	131	0	0
backend unit	199	0	0
browser system	21	0	0
frontend component/service/integration	190	0	0

Backend unit cases are identified by `backend/tests/unit/`; backend integration cases use real MongoDB or injected production-router collaborators as specified in each source. Frontend totals include component, service and integration suites, with mocked HTTP where defined. Browser totals are separately reported as system tests. Test cases exercise normal, malformed, authorization, boundary, concurrency and retry paths.

Evidence: complete case catalogue, backend JUnit, frontend JUnit. Zero failures means no failed assertion in this execution; it is not proof of absence of all defects.

Suite	Cases	Failures/skips
backend/tests/integration/admin-provisioning.test.ts	16	0
backend/tests/integration/attempt-api.test.ts	8	0

Case-level evidence

The complete 541-case catalogue records each executed case ID, name, source, duration and outcome. The updated Test Case Document supplies procedures, expected outcomes, boundaries and module ownership. Supporting integration/system cases are explicitly classified.
